

HONG KONG, Nov. 8.—Chinese children ranging from 7 to 14 years have set up an extra-curricular steel plant that is producing 10 tons of metal a day. While parents sleep, the youngsters aged 7 to 12 work two hours a day picking up iron and old nails, digging and gathering iron rods, 100 per cent of the 14-and-a-half-year-old iron machinery models and blow OXYGEN.

According to the Chinese Communist Youth League, this change of childhood training is a great success. The youth's Red MARCH STUDY AND LEARNING center has been used as an example by many schools throughout China.

Chinese Communist Political
No student is permitted to spend more than six hours a day at his shop while the teacher said, adding that there was some opposition to workers and parents before the problem was established.

Though the health and safety of the young is a major fact, said the teacher, nothing had happened.

All Activity Working and Social, in Yanchow Is Supervised by Party

By TILLMAN BURDIN
Special to The New York Times

HONG KONG, Nov. 8.—Party life has been introduced into all aspects of life in a model commune being built by Chinese Communists in Yanchow, Shantung Province, which is being publicized as being supervised by Chinese Communist authorities.

A coordinating center, Yangtze River, has a population of 10,000. Under the new system, the living quarters of workers and their dependents have been rearranged so that laborers' families
